

Cron Jobs

Cron jobs allow you to automate certain commands or scripts on your site. You can set a command or script to run at a specific time every day, week, etc. For example, you could set a cron job to delete temporary files every week to free up disk space.

Warning: You need to have a good knowledge of Linux commands before you can use cron jobs effectively. Check your script with your hosting administrator before adding a cron job.

Cron Email

Send an email with the output every time the cron job runs. [less »](#)

You can have cron send an email every time it runs a command which produces output. If you do not want an email to be sent for an individual cron job, you can redirect the command's output to /dev/null. For example: `mycommand >/dev/null 2>&1`

Update Email

Add New Cron Job

PHP command examples:

General example:

```
/usr/local/bin/php /home/wgqthxgd293p/public_html/path/to/cron/script
```

Domain-specific example:

```
/usr/local/bin/ea-php56 /home/wgqthxgd293p/domain_path/path/to/cron/script
```

In the above example, replace "ea-php56" with the PHP version assigned to the domain you wish to use. Look in the [MultiPHP Manager](#) for the actual PHP version assigned to a domain.
