Hi I need to use a Spotify api for my website (school project).

The green boxes (P1,P2, P3) are radio stations, when I click on them it expands and shows current/previous song. I need a Spotify api function that showcase the artist and song info of the current and previous song (In the rectangular boxes).

The current and previous songs are pulling from another api. SR-api. So basically, once you get the song results from SR radio the Spotify api will showcase the artist and song info in the black/white boxes. The size of the boxes is irrelevant, as long it's "normal" sized. Also how the song + artist info is structured doesn't matter.
